Alginate impression material

Specific characteristics for each application

Zhermack's wide range of alginates offering distinctive characteristics for each application: maximum elasticity and resistance, consistency and flowability, color variations and dimensional stability.

What do Zhermack alginates have in common?

All Zhermack alginates offer essential base characteristics:

- **Easy mix formulation:** facilitates mixing by means of rapid water absorption.
- **Dust Free Formula:** minimum dust to protect operator health, limiting the suspension of particles in the environment and resulting inhalation.
- **Storage over time:** 5 year shelf life from the production date.
- **Superior dimensional stability:** all formulations are optimised to reduce distortion, offering practitioners a choice of products which offer from 48 to 120 hours of dimensional stability.
- **Thixotropy:** even in the lighter formulations, the alginate will not drip into patients' mouth.
- **Pleasing flavors** which are well-tolerated by patients.
